

**India Reports an average 85 Rape Cases
Daily (2018–2022),
1 in 6 Victims Is a Minor,
Only 47% of Cases Reach Verdict**

**A complete Data
Analysis of Rape cases
in India (2018 - 2022)**

Introduction

Sexual violence remains one of the gravest human rights issues in India. Despite reforms in law and rising public awareness, the frequency of reported rape cases continues to alarm policymakers, law enforcement, and citizens alike. This project aims to perform a comprehensive SQL-based analysis of rape cases across all Indian states and union territories (UTs) from 2018 to 2022.

Legal Framework

What the Law Says (India):

- IPC 375: Defines rape
- IPC 376: Prescribes punishment (7 years to life imprisonment)
- POCSO Act: For child victims, it enforces stricter penalties

Problem Statement

Despite strict laws, the number of rape cases in India remains alarmingly high. Many victims are denied justice due to delayed trials, low conviction rates, inadequate victim support systems, and societal stigma.

Moreover, **political influence**, law enforcement bias, and systemic inefficiencies often obstruct the path to justice — especially in high-profile or rural cases.

There is a pressing need to identify reporting patterns, uncover gaps in enforcement, and address the institutional and political barriers that prevent timely and fair outcomes for survivors.

Objective

- Analyze trends in rape cases reported across Indian States and UTs
- Compare victim age groups (Below 18 vs. 18 and above)
- Evaluate police and judiciary performance (charge-sheeting and trial completion rates)
- Identify the most and least affected regions
- Generate data-backed recommendations to inform policy

Tool Used

- **SQL:** For data extraction and analysis
- **Excel:** For data Visualization
- **Canva:** For creating the presentation layout

Data Overview

- The dataset consists of two tables – one for state-level data and another for Union Territories (UTs). These were combined to create a master table for unified analysis.
- Timeframe: 2018 to 2022

Tables:

- Table 1: State Data
- Table 2: UT Data
- Table 3: Master Table (Combined State & UT Data)

Fields / Columns of the tables :

Columns / Fields	Description
• Sl. No. -----	Serial number
• Region Name -----	Name of State or Union Territory
• Rape_Year_Girls_Below_18 -----	Cases involving girls under 18
• Rape_Year_Women_Above_18 -----	Cases involving adult women
• Rape_Year_TotalCasesRegistered -----	Total reported rape cases
• CCS_Year -----	Cases Charge-Sheeted
• CTC_Year -----	Cases with Trial Completed

Key Terms

What is **CCS (Charge Sheeted Cases)** ?

CCS (Cases Charge Sheeted) refers to the number of cases in which the police have completed their investigation and filed a charge sheet in court. This indicates that the investigation found enough evidence to formally accuse someone of the crime.

In simple terms: These are cases where the police believe the accused should face trial.

What is **CTC (Cases in Which Trial was Completed)** ?

Under the Indian judicial process, once a charge sheet is filed, the case goes to trial. A case is considered part of CTC when the trial has been concluded – either through:

- Conviction (the accused is found guilty), or
- Acquittal (the accused is found not guilty), or
- Discharge (lack of evidence or legal grounds to continue).

This aligns with the CrPC Sections 235, 248, which deal with judgment in sessions and magistrate trials.

✓ In the context of rape cases: CTC reflects how many cases actually reached a final verdict in court, not just those that were charge-sheeted.

Quick Stats

Avg Rape per Year (2018 - 2022)	31,325
Total Reported Rape Cases (2018–2022)	156,627
Total Reported Rape Cases of Girls Below 18 Years (2018–2022)	20,925
Total Reported Rape Cases of Women Above 18 Years (2018–2022)	135,702
Percentage of Charge-Sheeted Cases (2018–2022)	82.85%
Trial Completion % Out of Charge-Sheeted Cases (2018 - 2022)	57.21%
Trial Completion % Out of Total Registered Cases (2018 - 2022)	47.40%

Key Insight

- Avg. **85** rape cases reported daily (2018–2022)
- Only **47%** reached a final verdict
- Rajasthan: Highest number of total cases
- Goa: Highest % of underage victims (**67%**)
- Delhi: **75%** of UT-level cases reported here
- Nagaland & Sikkim: Least reported cases

Analysis

Total Rape Cases Registered in States vs UTs (2018–2022)

Insights: This largely reflects the population distribution and urban spread across regions.

Year-on-Year Total Rape Cases in India (2018–2022)

Insights: Despite a 15.9% drop from 2018 to 2020, rape cases bounced back in 2021, suggesting that temporary declines were circumstantial rather than systemic.

Victim Age Distribution in Reported Rape Cases (2018–2022)

Insights: 1 in every 6 rape victims in India is a minor (17%)

Top 5 Regions with Most Rape Cases (2018–2022)

Insights: Rajasthan alone accounts for over 17% of all reported rape cases during this period (based on the national total of ~156,627 from earlier calculations), making it the most affected state in India.

Top 3 UT with Most Rape Cases (2018–2022)

Insights: Delhi alone accounts for over 75% of the total rape cases among all UTs, making it by far the most affected Union Territory in India when it comes to sexual violence.

Possible reasons may include:

- High population density, leading to more reported cases.
- Migration and anonymity in big cities may embolden offenders.

Region with Most Rape Cases Involving Girls Below 18 Years (2018–2022)

Region with Most Rape Cases Involving Girls Below 18 Years (2018–2022)

Insights: These numbers highlight that Rajasthan alone accounts for nearly double the cases reported in Madhya Pradesh, and almost 20–25% of all underage rape cases in the country (based on total ~20,925 from earlier analysis)

This alarming concentration may be influenced by factors such as:

- Low literacy rates in rural and tribal regions,
 - Lack of awareness about child rights and legal protections,
- Cultural and societal backwardness, including gender inequality and silence around sexual violence.

Proportion vs Count: Rajasthan and Goa Explained

- Rajasthan may have the highest number of underage rape cases in absolute terms.
- However, the ranking of regions here is based on the percentage of underage cases relative to the total rape cases within that region, not on the total number of underage rape cases across all regions.
- For example:
- If Rajasthan has 10,000 total rape cases and 2,500 involve girls under 18, that's 25%.
- But if Goa has 100 total rape cases and 67 involve minors, that's 67% — hence, Goa ranks higher in terms of proportion.

Percentage of Below 18 Cases in Total Rape Cases (Per Region)

Insights: In regions like Goa, Chandigarh, and Himachal Pradesh, more than half of reported rape victims are under the age of 18.

This insight demands urgent attention from policymakers, law enforcement, and child welfare organizations to strengthen preventive, legal, and support frameworks to protect minors from sexual violence.

Possible Reasons Behind High % of Underage Rape Victims:

- ◆ **Goa:** Tourism-related vulnerabilities — including trafficking, child exploitation, and exposure to external influences — may increase the risk of sexual crimes against minors.
- ◆ **Chandigarh:** Urban lifestyle and high reporting culture — being a well-administered UT with relatively higher awareness and access to legal systems, more cases involving minors may actually get reported here.
- ◆ **Himachal Pradesh:** Remote settlements and poor access to education — in tribal and rural belts, lack of supervision, limited child protection infrastructure, and social isolation can increase risk for children.
- ◆ **Arunachal Pradesh:** Tribal areas with limited law enforcement presence — difficult terrain and cultural silence around sexual crimes may contribute to both actual incidence and underreporting of adult cases, skewing ratios.
- ◆ **Andhra Pradesh:** Deep-rooted gender inequality in rural areas — combined with weak sex education and societal pressure, may expose minors to early abuse, often from known persons.

State with Least Reported Rape Cases (2018–2022)

Insights:

- ◆ Small population, strong community ties — or underreporting
- ◆ **Goa:** Despite being a tourist hub, Goa's relatively low 338 cases may reflect effective urban policing and higher public awareness, though population size also plays a role.

Rape Cases in India: Least to Most (2018–2022)

Rank	RegionName	Total_Cases
1	Nagaland	33
2	Sikkim	60
3	Mizoram	165
4	Manipur	188
5	Goa	338
6	Arunachal Pradesh	347
7	Tripura	387
8	Meghalaya	406
9	Himachal Pradesh	1,751
10	Tamil Nadu	1,925
11	Karnataka	2,651
12	Gujarat	2,766
13	Uttarakhand	2,975
14	Punjab	3,316
15	Bihar	3,854
16	Telangana	3,880
17	Andhra Pradesh	4,961
18	West Bengal	5,499
19	Kerala	6,190
20	Odisha	6,431
21	Jharkhand	6,550
22	Chhattisgarh	6,676
23	Haryana	7,652
24	Assam	7,924
25	Maharashtra	11,902
26	Madhya Pradesh	16,233
27	Uttar Pradesh	16,315
28	Rajasthan	27,378

Insights from India's North to South, East to West

2018 - 2022:

◆ North India

- Delhi reported the highest number of rape cases among UTs, contributing to over 75% of all UT-level cases.
- Jammu & Kashmir also showed a high volume of reported cases.
- Chandigarh ranked 2nd for underage rape cases and 3rd overall in total UT rape cases.

◆ West India

- Rajasthan accounted for over 17% of India's total rape cases and nearly 24% of cases involving minors.
- Goa had the highest percentage of underage victims, with 67% of its total rape cases involving girls below 18.
- Maharashtra consistently ranked in the top 5 states for total reported rape cases.

Insights from India's North to South, East to West 2018 - 2022:

◆ South India

- Andhra Pradesh and Kerala reported high numbers of underage rape cases, both in terms of volume and percentage.

◆ East India

- Uttar Pradesh showed consistently high numbers in both total and minor-involved rape cases.

◆ Central India

- Madhya Pradesh recorded high case volumes every year, making it one of the most affected states after Rajasthan.

Insights from India's North to South, East to West 2018 - 2022:

◆ Northeast India

- Nagaland, Sikkim, and Mizoram reported the lowest number of rape cases across all regions.
- This could be due to smaller populations, close-knit community structures, or underreporting driven by social stigma and cultural silence.

⚠ **Despite legal reforms**, there has been **no consistent decline** in reported rape cases between 2018–2022, reflecting systemic **inaction** and **limited government** intervention.

Recommendation:

- 🛡️ Strengthen child protection in high-minor-rate regions
- 🕒 Fast-track courts in high-volume states
- ⚖️ Encourage reporting by reducing stigma
- 📢 Regular public awareness campaigns

I welcome any corrections or suggestions to improve the accuracy and impact of this work.

Thank You !!!
